Pushing the Experience Frontiers

"Good Morning! Would you like me to order your regular coffee from Starbucks today?"

"Yes Alexa, order my Starbucks please."

"Okay, let me place the order when you are five minutes away from the store."

Convenient, isn't it?

With **Amazon** introducing the "Starbucks Reorder Skill" for Amazon Alexa, one can now re-order their Starbucks favourites by just talking to Alexa. All it needs is for the user to have installed the Starbucks mobile app on their device and an account setup where one is required to define their favourites to order.

In a competitive world to enhance convenience, companies are rediscovering voice technology. A report by **VoiceLab** estimates 24.5 million voice-first devices to be shipped in 2017 – of course **Amazon Alexa** and **Google Home** are leading the way.

Shopping is another chore that has been added to the long list of conveniences. Companies that truly value their customers are working toward not only saving money for their customers but also saving time through simplifying this everyday chore (for some).

INTERESTING NEWS

Capital Float to now give loans to vegetable sellers, other SMEs

Capital Float is all set to give small loans to vegetable sellers and kirana stores to help them manage their daily business better.

Having partnered with Paytm and Payworld to track the payment history of these merchants, Capital Float will give them short-tenure loans for their business operations.

In the U.S., Amazon's Alexa has long aided customers to shop directly from the online retail giant. Playing catch up with Amazon, **Walmart** has collaborated with Google to offer thousands of products for voice shopping via Google Assistant. Moreover, they have integrated the 'Easy reorder' feature into Google Express, which helps provide highly personalized shopping recommendations based on customers' previous purchases, including those made in Walmart stores and website. Even **Target** has announced its partnership with Google to enable customers to use Google Express for its home delivery service.

Ebay's tie-up with specialist retailer **Saatchi Art** to create an experimental shopping experience has pushed customization to another level. It combines art and technology to uncover shoppers' subconscious desires. The experiment invited select guests to an art gallery where they were hooked up to headsets using electroencephalogram technology to sense the electrical activity going on inside a person's brain.

This mind-reading technology, designed by **MyndPlay**, senses and maps moments when the wearer is inspired by what they see. This information is being used to create personalized shopping carts on eBay. This innovative technique is designed to be used with the billion items selling on eBay's virtual marketplace.

With both online and offline retailers vying for consumers, enticing customers by making the shopping experience fulfilling is a must - be it through the use of voice assistants or through the use of neuroscience; whatever works.

Linking Aadhaar number to bank accounts is mandatory, says RBI

The Reserve Bank of India (RBI) clarified that linking bank accounts to Aadhaar is mandatory under the Prevention of Money Laundering Act, dismissing media reports which suggested that such a linkage is not mandatory.

"The Reserve Bank clarifies that, in applicable cases, linkage of Aadhaar number to bank account is mandatory under the Prevention of Money-laundering (Maintenance of Records) Second Amendment Rules, 2017 published in the Official Gazette on June 1, 2017," it said in a statement.

Aditya Birla Health Insurance targeting young Indians through its digital strategy

"There is a huge need for health insurance but relatively very low penetration in India," acknowledged Mayank Bathwal, CEO of Aditya Birla Health Insurance Co. Ltd (ABHI), in an interview in Mumbai.

ABHI, according to Bathwal, is relying on tools such as mobile apps, cloud computing, wearable devices and data integration with other entities in the healthcare ecosystem—in addition to products that give insurance cover "beyond hospitalization"—to carve out a niche for itself.

Can blockchain technology be an answer to India's land governance woes?

The current government has recently renewed the push for making all land records and titling digital through the Digital India Land Records Modernization Programme (DILRMP).

Is there a way where every land unit can be assigned a unique identification, every transaction has a fingerprint, and the data is secure and immune to duplication and hacking? Enter blockchain. In its simplest form, blockchain is a distributed ledger record of transactions.

Bengaluru-based Cashfree banks on bulk transfers

Cashfree founders Reeju Datta and Akash Sinha were interacting with e-commerce players trying to digitise cashon-delivery payments when they stumbled upon a much bigger problem the companies were facing: bulk bank transfers.

That's how Bengaluru based Cashfree moved from being a customer-facing digital payment solution provider to a technology platform that digitises both inward and outward bulk payments for merchants.
